PROJECTS

Home Automation Project

Developed a Home Automation System as part of my BIT coursework, capable of controlling home appliances such as lights and fans using sensors and micro controllers. This project enhanced my knowledge and practical skills in IoT, Embedded Systems, programming, and problem-solving while strengthening my ability to work effectively in a team.

Web-Based Food Ordering System

I developed a Web-Based Food Ordering System as part of my BIT coursework. The system enables users to browse food menus, place orders, and manage customer information efficiently. This project enhanced my skills in web development, database management, and software system design, while also providing practical experience in developing and implementing a complete software solution.
